

Covid Update 7/5/2021

As of May 7, 2021, Vietnam's Ministry of Health confirmed a total of 3,091 cases of COVID-19. However, 2,560 of the affected patients have recovered and been discharged from hospitals. Vietnam has also recorded 35 deaths due to the pandemic. The latest community transmission cases have been reported from Hanoi, Vinh Phuc, Thai Binh, Bac Ninh, and Da Nang among others. 16 local cases are linked to the National Hospital of Tropical Diseases in Hanoi's Dong Anh district.

In order to minimise the risk of contagion, Vietnam is isolating individuals who have come into close contact with others carrying the COVID-19 disease. If you have any contact — such as the sharing of flights, vehicles, or hotels — with others who have tested positive for COVID-19 while in Vietnam, you can expect to be tested for the virus and placed in 21-day quarantine.

Vietnam observes several levels of quarantine:

1. Self-quarantine in homes or hotels with regular check-ups by local health authorities,
2. Quarantine in health establishments for those showing symptoms of the virus, as well as those who have tested positive for COVID-19 and those in close contact with them,
3. Quarantine in non-medical establishments for those returning from high-risk areas, and
4. Closed-off communities for areas with high numbers of confirmed infections.

All measures outlined as of this date 7/5/2021 are until further notice. Please contact our office for more details:
